［10 pt］2．Consider the following system at equilibrium：

$$
125 \mathrm{~kJ}+\mathrm{Mg}(\mathrm{~s})+\underline{2} \mathrm{HCl}(\mathrm{aq}) \rightleftharpoons 1 \mathrm{H}_{2}(\mathrm{~g})+1 \mathrm{MgCl}_{2}(\mathrm{aq})
$$

（a）Should you add or remove HCl to increase the production of hydrogen gas？2（a） $\qquad$ Add Explain．
Addiing HCl will shift the equilibrium to the right to decrease the HCl ，therefore increasing $\mathrm{H}_{2}$ ．
（b）Should you increase or decrease the temperature to increase the production 2（b）Increase of hydrogen gas？Explain．
Increasing the temperature will shift the equilibrium to the right increasing the amount of $\mathrm{H}_{2}$
（c）Should you increase or decrease the pressure to increase the production of 2（c）＿Decrease hydrogen gas？Explain．
The reaction will seek to increase the pressure by producing more $\mathrm{H}_{2}(\mathrm{~g})$ ．
（d）Is the reaction shown an exothermic or endothermic reaction？Explain．
